

CROWD SALE

OWN & EARN

Solar PV cells powering a 510.30 kW solar plant with 1 MWh battery storage for Nhimbe Fresh | Marondera, Zimbabwe via Pick It Fresh (Botswana)

OVERVIEW

Currency Guide (1)

ZAR	113.00
USD	~6.63
BTC	~0.0004

This document describes how to purchase solar cells that will be installed and earn you a monthly income equivalent to 16.71% (ZAR) / 13.70% (USD) IRR through a fixed price 20 year operating lease.

- Offer** Purchase silicon solar cells to be installed in a complete solar system leased via a special purpose corporation for the Nhimbe Fresh Solar Project.
- Eligibility** Anyone, subject to identity verification, may purchase solar cells
- Price** Fixed at South Africa Rand (ZAR) 113.00 per cell. ZAR and BTC accepted.
- Quantity** 181,440 cells available (~2.81 W per cell)
- Lease Term** 20 years (2)
- Lease Rate** USD 0.081 per solar cell per month to the energy consumer. After insurance and servicing fees, Cell Owners will receive USD 0.06 per solar cell per month, equivalent to a USD pegged Internal Rate of Return (IRR) over 20 years estimated at 16.71% IRR in ZAR, or a 13.70% IRR in USD.

Each nation and jurisdiction has its own laws and regulations governing the offering of financial and other products that enable a purchaser to earn income over time. In the event we reasonably determine that the sale of solar cells and subsequent payment of lease rental to you in excess of your original purchase price would require us to register the sale as a securities offering, or obtain an exemption under securities laws or regulations in your jurisdiction, we have the option to not pay you rental income in excess of your original solar cells purchase price, and instead donate only those excess rental amounts received from Nhimbe Fresh to the project's designated charity.

Notes from previous page

- 1) As of date of publishing of this document.
- 2) The Solar Cells Owners Lease becomes effective when this sale ends, and terminates 20 years after the solar system becomes operational. You may notify us of your intention not to enter the lease and physically receive your solar cell and forgo its installation into the project, otherwise you will be deemed to enter into the lease agreement.
- 3) Forecast maximum internal rate of return if leased for the full term. Includes insurance premiums, taxes, fees and expenses to Sinogy , The Sun Exchange (SunEx) and others. Effective lease rate may be higher or lower due to home country tax benefits, currency values, and others. Please read the terms and risk factors in this Product Information document for more details.

HOW IT WORKS

Your solar cells will be leased to Nhimbe Fresh as part of a 510.30 kWp solar energy system with energy storage

Your solar cells will power the Nhimbe Fresh Packhouse and Coldstore

Nhimbe Fresh will pay a fixed monthly amount for the use of your solar cells

The Sun Exchange platform arranges all the leasing and rental collection so you receive a solar-powered rental stream automatically.

You may access real-time solar energy production data to track the performance of your solar cells in real-time.

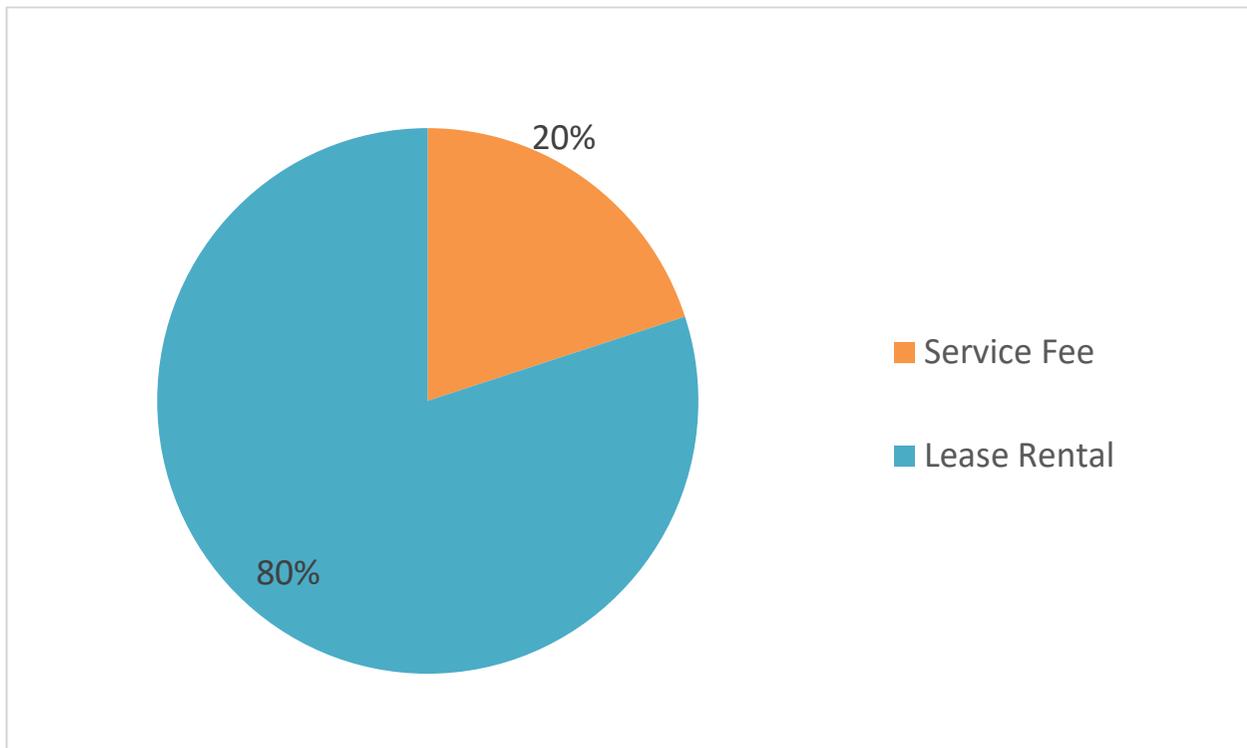

RENTAL INCOME & FEES

In Year 1, Nhimbe Fresh will pay you **USD 0.08** per solar cell per month. This will be paid in South African Rand (ZAR) or in Bitcoin (BTC) into your Sun Exchange wallet. This pie chart shows how this income will be divided in Year 1. The lease rate will escalate at CPI + 1% per year. The assumptions used are a USD CPI of 2%, and a ZAR CPI of 5%.

'Service Fee' covers insurance (fire, theft and damage/liability), ongoing maintenance (annual cell cleaning), contributions to a maintenance reserve and administration services.

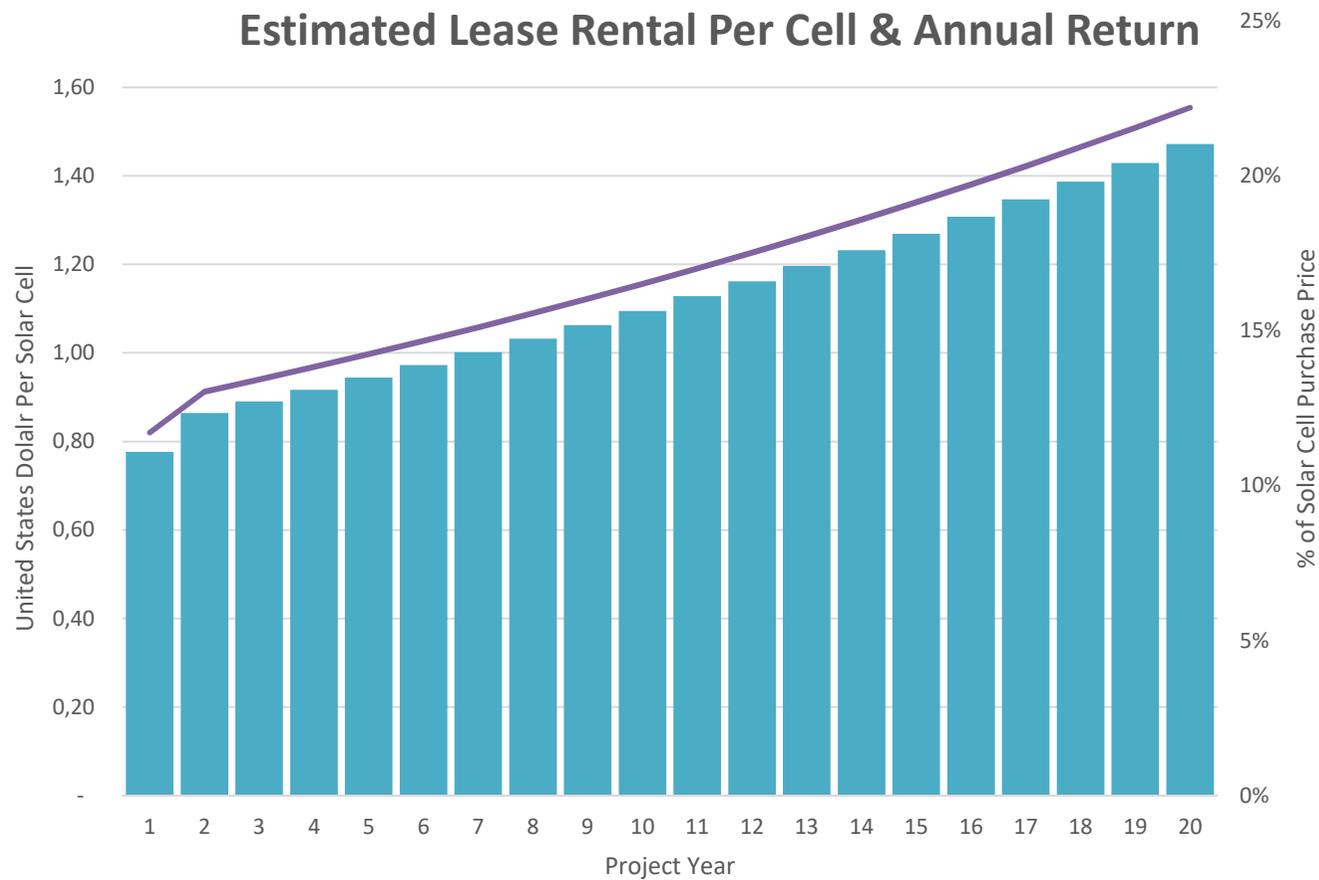

**Annual lease rate will escalate at an estimated 3% per year against USD, and 6% per year against ZAR.*

20 YEAR INCOME PER SOLAR CELL (USD)

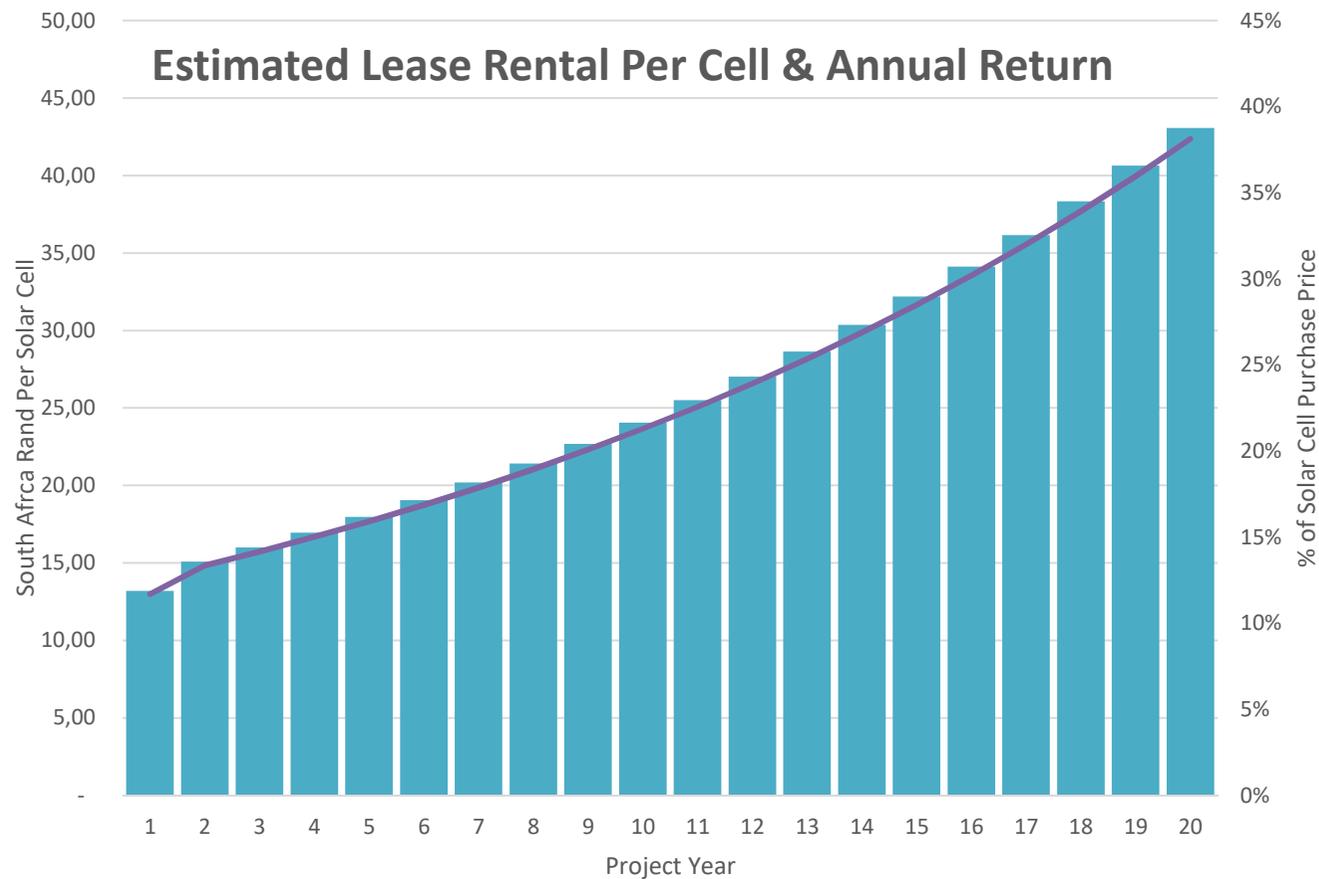

The rental rate for your solar cells is forecast to increase by 3% per year in USD. This chart shows how your rental income will increase over time.

20 YEAR INCOME PER SOLAR CELL (ZAR)

The rental rate for your solar cells is forecast to increase by 6% per year in ZAR. This chart shows how your rental income will increase over time.

SOLAR POWERED MONEY

Buying solar cells through The Sun Exchange is easy.

1. Create an online account at www.thesunexchange.com
2. Complete the identity verification process
3. Choose your currency and make payment in ZAR 113.00 or ~BTC 0.0004 increments (the price of each cell). You can pay by credit card, bank transfer, Bitcoin and directly from your Sun Exchange ZAR or Bitcoin wallet.
4. Your payment is held in a separate account ⁽¹⁾ until the required number of cells are sold or the sale ends.
5. For Bitcoin payments, you may place an Order where the number of solar cells allocated will depend on the ZAR/BTC exchange rate when the sale ends. ⁽³⁾ The Sun Exchange tracks the Bitcoin value. Check your dashboard to track how many cells your Variable order entitles you to. You can only buy whole units, so any unused BTC will be returned to your wallet at the end of the crowd-sale period.

This crowd-sale ends 60 days after crowdsale open announcement or when all the solar cells have been sold, whichever is sooner ⁽²⁾

You cannot cancel your order before the crowd-sale ends. If we terminate the sale early, or if all the solar cells are not purchased, your money will be returned in full in your payment currency.

(1) See the Foreign Exchange Schematic in the Appendix for more details. ZAR payments kept at in trust in ABSA Bank. BTC is kept in cold storage.

(2) Our website will show sale progress towards the target. Sale end many occur quickly and without warning.

(3) Immediately prior to sale end, BTC required to buy integer numbers of solar cells will be exchanged to ZAR, inclusive of any foreign exchange commissions we pay to third parties. Excess BTC amounts will be returned to the account holder. We may use exchange rates and fees that reflect conditions in international currency markets at the time, in our sole and absolute discretion. BTC exchange rates can be volatile and unpredictable; we accept no liability for foreign exchange losses or fees

GETTING PAID

How you get paid your rental income depends on your purchase currency and where you live. *Tip: The video tutorials on the right hand side of this page give a visualised explanation*

IF YOU PURCHASE YOUR SOLAR CELLS IN ZAR FROM A ZAR ACCOUNT

You will receive lease rental at least monthly paid in ZAR into your nominated ZAR account but you can opt in to receive Bitcoin at any point.

[Video Tutorial 2:
Getting Paid](#)

IF YOU PURCHASE YOUR SOLAR CELLS IN BITCOIN OR FROM A NON-ZAR ACCOUNT

We will convert your ZAR rental income into BTC and send payments via the universal Bitcoin digital currency network. ZAR is converted to BTC once a month using the ZAR/BTC spot price at that time.

[Video Tutorial 3:
Paying with
Bitcoin](#)

IF YOU PURCHASE YOUR SOLAR CELLS USING SUN EXCHANGE WALLET BALANCES

You can contribute to an order or pay for an entire order using BTC or ZAR balances on your Sun Exchange dashboard. You can supplement your balance with an additional payment by credit or debit card, bank transfer or Bitcoin payment.

See this [blog feature](#) for more information.

WHAT IF THE SOLAR PLANT BREAKS DOWN?

The solar plant will be under an installation defects warranty for the first 2 years. The inverter is under warranty for 10 years and the solar panels have 25 year power output guarantee. After year 2 a pre-determined portion of the lease rental income will go into a reserve maintenance fund to finance any remedies that are not covered by the fire, theft and damage insurance policy that will be in place for the duration of the lease period. The estimated lease rental income illustrated to you takes into account these maintenance reserve payments.

ARE THE CELLS STILL MINE AFTER THE 20 YEAR LEASE?

At the end of the 20 lease term your solar cells still belong to you but they are approaching the end of their design life. Sun Exchange will assist in negotiating an additional 5 year lease, or, selling the cells and the rest of the system to the customer for an estimated residual value which will be returned to you.

WHY IS THE PROJECT NOT FUNDING THE SOLAR PLANT THEMSELVES?

Leasing the solar plant reduces their overall energy costs without having to deploy their own capital. Many organisations view electricity as a variable cost and would rather not use their working capital to fund energy generating hardware. Leasing the solar plant is an easier business decision as it gives them instant access to lower energy bills with a fully serviced solution without having to own it.

CAN I BUY SOLAR CELLS IN MULTIPLE PROJECTS?

Of course and we encourage this. Owning solar cells across multiple project mitigates the economic impact on you in the event of an isolated default on a single project and spreads the social and economics impact you can create.

ARE THERE ANY GUARANTEES IN PLACE THAT THE SOLAR CELL LESSEE WILL HONOUR THE 20 YEARS OF LEASE PAYMENTS?

The lease is legally binding for 20 years. In the event of a default the solar plant may be relocated to another project or a new building occupier may take over the lease. We have conducted due diligence on Nhimbe Fresh and you can view their financial data upon request. The Sun Exchange also has 'skin in the game' as we own the remainder of the solar plant and receive on-going service fees. We don't host projects that we don't believe will fulfil the lease term.

ARE THE ESTIMATED RETURNS GURANTEED?

The lease payments you will receive are fixed monthly payments agreed through a 20 year lease contract.

IF I PAY FOR CELLS BY CREDIT CARD / ZAR, CAN I GET MY RENTAL INCOME PAID IN BITCOIN?

Yes you can. There is a setting for this when you set-up your account and you can change this setting at any time.

YOUR SOLAR CELL

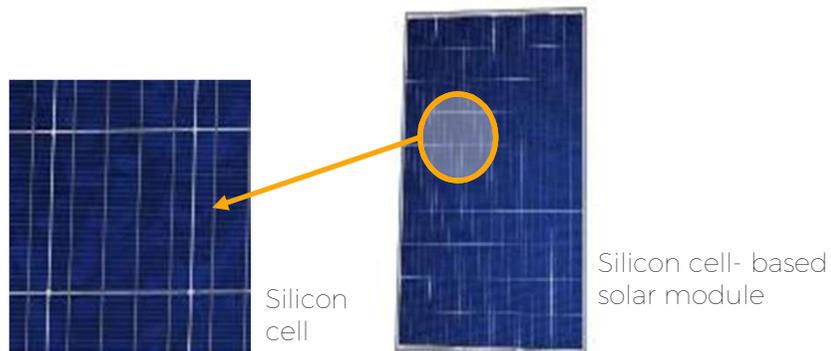

Your solar cells are manufactured by Suntech. ⁽¹⁾

Solar cells are the 'business end' of a solar energy system and are mounted in modules of 144 cells. Nhimbe Fresh requires 181,440 solar cells totalling 510.30 KWp, that is 1260 x 405W solar modules.

Your solar cells will be installed as part of a 510 kWp rooftop solar system on the roof spaces in the image below:

**Nhimbe Fresh is at: 1 Cascade Road,
Marondera, Zimbabwe**

(1) The indicative solar system data sheet is included in this product information document. The final choice of the manufacturers and the type of components may differ from the product described, but will be equal to the requirements and quality standards as indicated here

ENERGY STORAGE

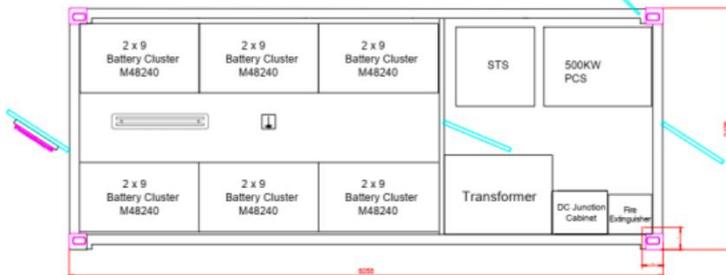

Your solar cells will be stored in 90 x 11.52kWh lithium iron phosphate battery modules installed into a climate controlled container.

Item	Parameter
Model	PWS1-250K
DC (battery)	
Battery charge voltage	500V-850V
Battery charge current	550A max
AC(on-grid)	
Rated voltage	400V
Voltage range	±15%
Rated current	360A
Frequency	50Hz/60Hz±2.5Hz
AC output PF	-1~+1
Rated power	250kW
AC(off-grid)	
Rated voltage	400V
Voltage range	±10%
General information	
Peak efficiency	97.30%
AC connection	3W+N+PE
Cooling	Forced air
Noise	70dB
Operating temperature	-20 to +50 °C
Humidity	0-95%
Dimension(WxHxD)	1200 x 2160 x 1200mm
Weight	1280kg

Packhouse

OWNING A SOLAR CELL

OWN SOLAR CELLS LOCATED IN THE SUNNIEST CONTINENT ON EARTH AND GENERATE SOLAR-POWERED RENTAL

OUR SERVICES

- Purchase solar sells and lease them for 20 years
- Nhimbe Fresh pays for all the electricity generated by the system
- Rental doesn't depend on government tax breaks or special tariffs
- The crowd-sale of solar cells enables us to purchase supporting equipment such as mounting structures, inverters, cables, etc.
- We estimate a 16.71% rental IRR over the 20-year term against ZAR and 13.70% IRR against USD
- You may be able to sell your solar cells through a secondary market
- We will give you a reference number for each cell giving you its exact physical location so you can even visit it!

Purchasing a solar cell enables you to lease them such that businesses can power their operating equipment. We can arrange the lease agreements, insurance coverage, equipment maintenance and other contracts when you complete your purchase.

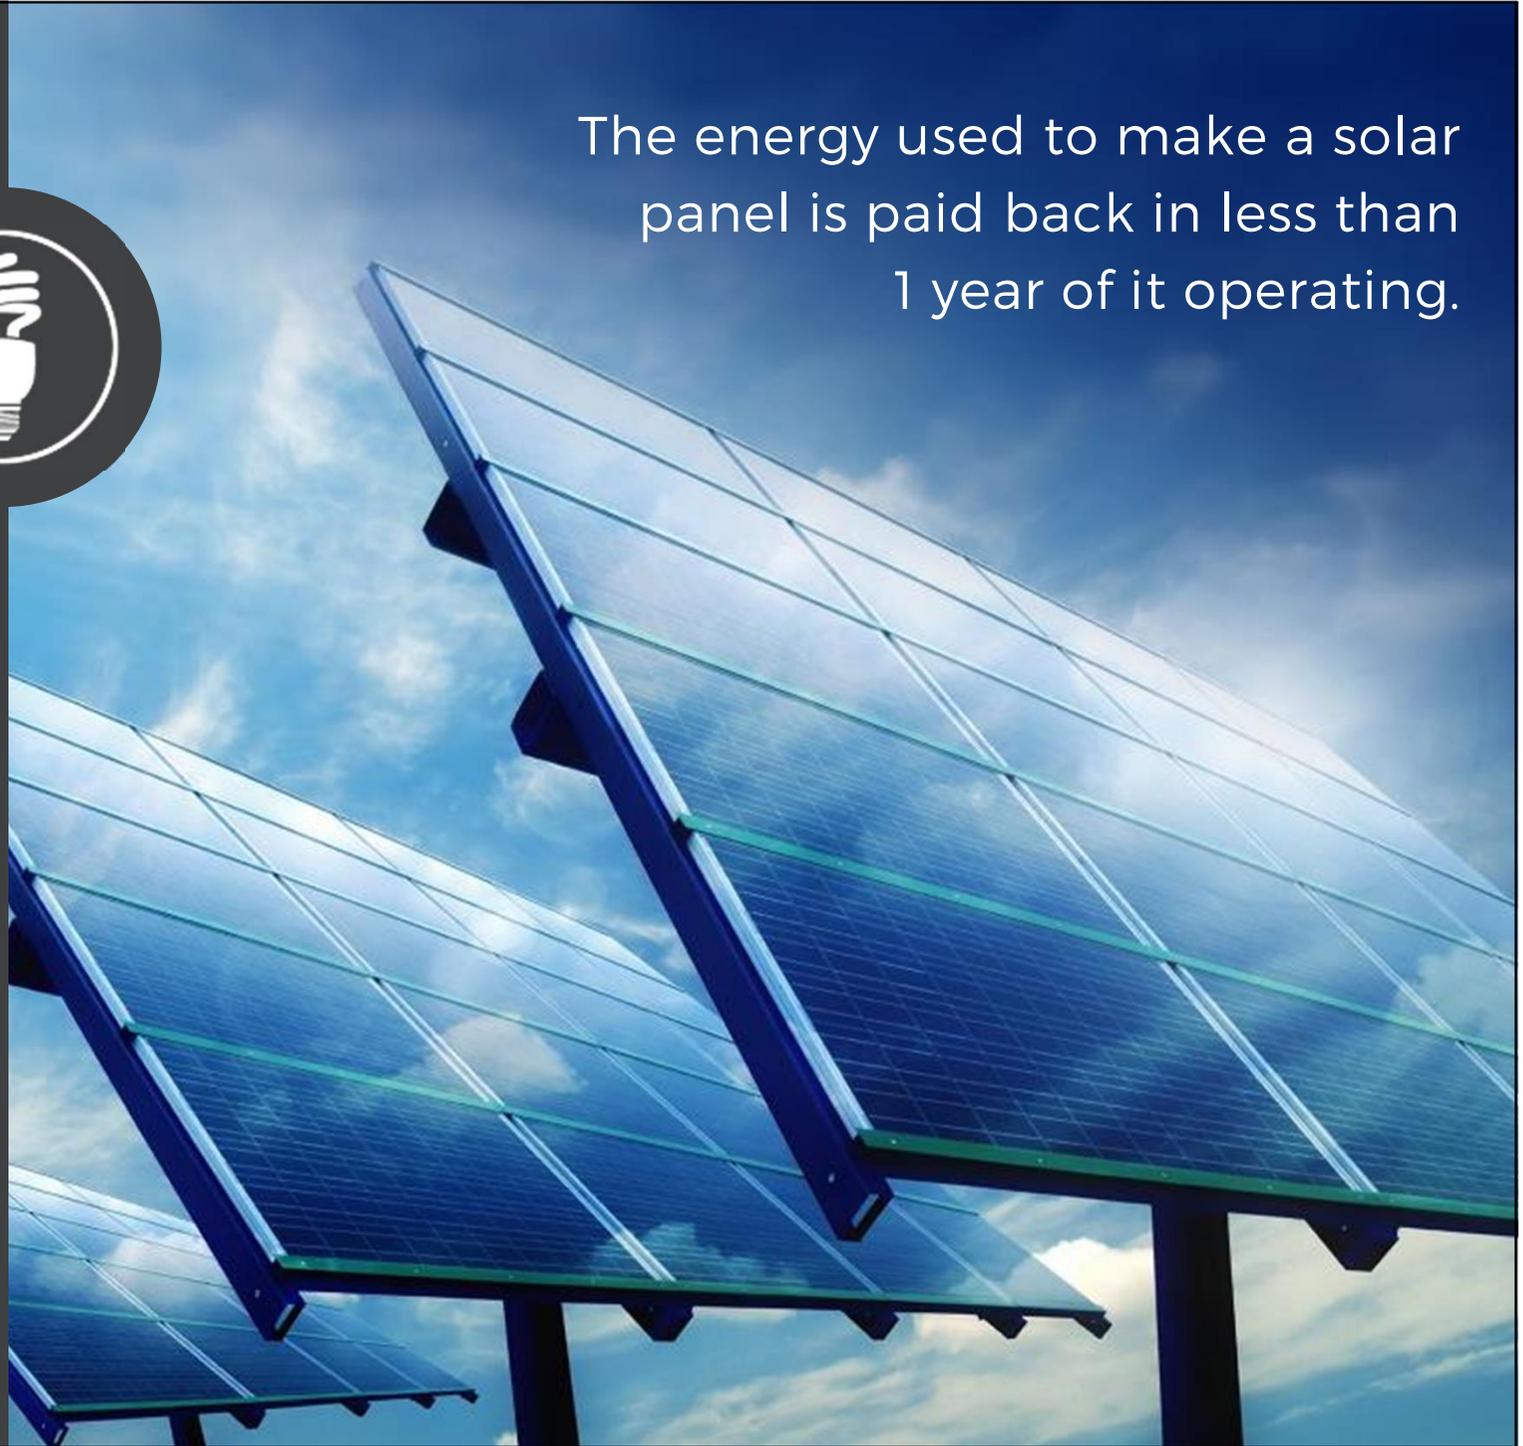

You also have the option to acquire physical possession of your cells when you purchase.

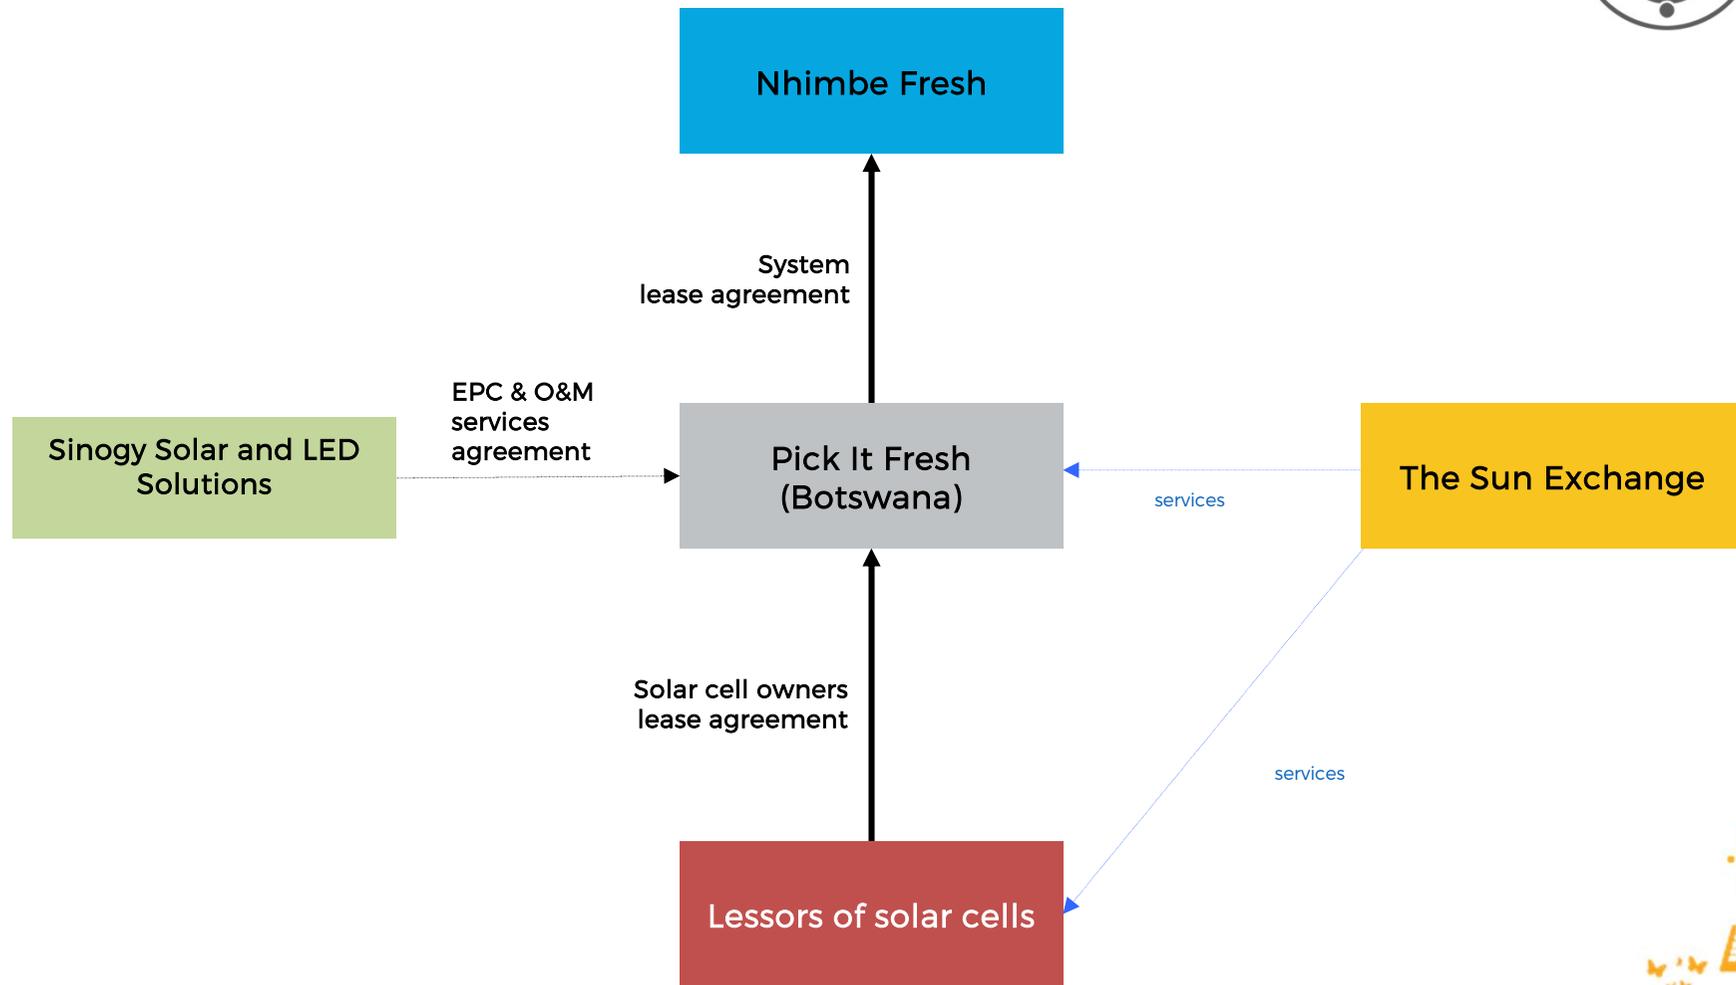

DID
YOU
KNOW

The energy used to make a solar panel is paid back in less than 1 year of it operating.

SYSTEM PARTICIPANTS

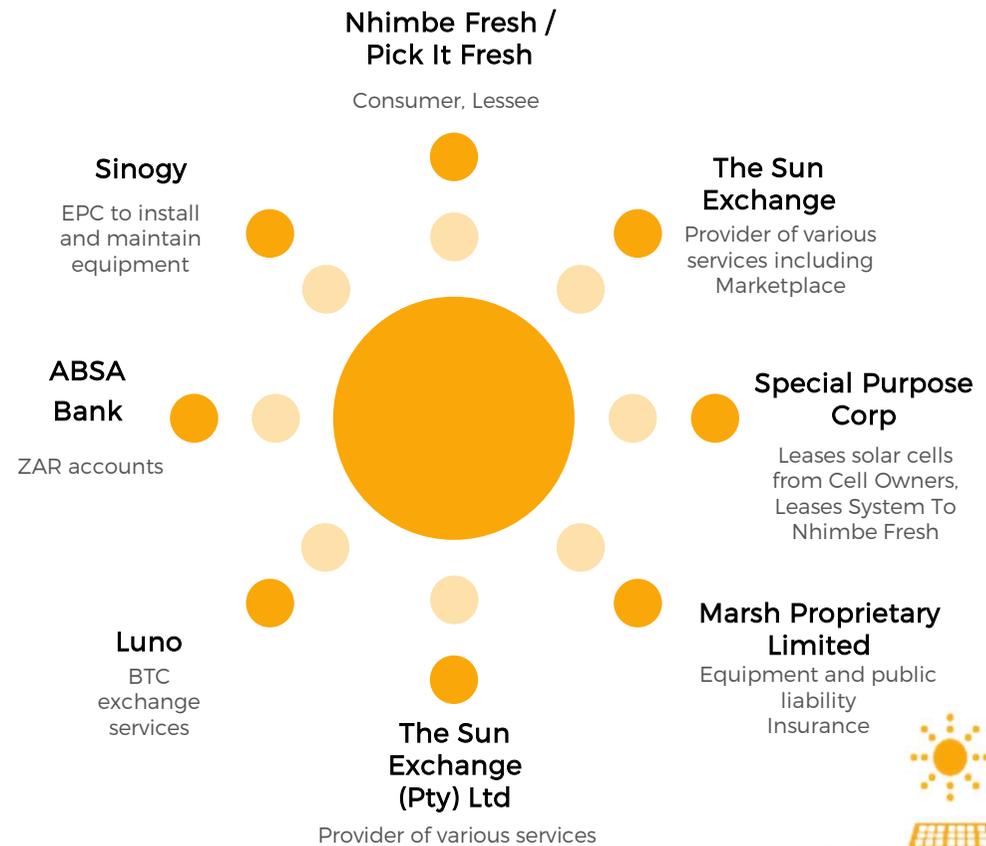

SYSTEM PARTICIPANTS

LEASE OF THE SYSTEM INVOLVES THE FOLLOWING PARTIES:

PARTY	ROLE
You / Lessor	Lessor of the solar cells to Special Purpose Corp
Nhimbe Fresh	Solar energy Consumer, that leases the system from Special Purpose Corporation
Sinogy	Engineering, procurement, construction and maintenance of the solar system
ABSA Bank, or other financial institution	ZAR accounts for solar cell rental collection and payments
Luno	Digital currency exchange transactions
Special Purpose Corp	Lessor of the entire solar system to Nhimbe Fresh
The Sun Exchange	Provider of marketplace and various services. Owns and leases the balance of system equipment to SPC

NHIMBE FRESH

Founded in 1996, Nhimbe has evolved from one of Africa's premier exporters of prepared and premium vegetable exporters to a supplier of blueberries, raspberries, and peas for export. United Exports has granted Nhimbe exclusive rights to grow its Oz Blu range of low chill blueberry varieties in Zimbabwe. Over the years Nhimbe has acquired a strong international customer base in the UK, EU and South Africa markets. Buyers include Tesco (UK) and Woolworths (South Africa).

Nhimbe Fresh is the operating company through which all production and packing operations in Zimbabwe are managed. An experienced and effective management team is supported by a large and well-trained work force produce the crops to the international standards. Read more: www.nhimbefresh.com

NHIMBE FRESH - ENVIRONMENT

Nhimbe Fresh, being dependant on the land and water resources, is focused on protection of its environment. Dam walls are maintained and kept free of bush and tree encroachment and stocked periodically with fish. All lands are contoured with water courses, while the catchment and wetlands are protected and managed to minimise erosion. Noxious weeds are cut out and sustainable plantations of renewable timber have been established where suitable. An annual Global GAP audit forms part of this assessment.

Cattle herds are run within the carrying capacity of the land. The waste water and effluent from the pack house, is managed through a Bio Wetland natural system. The water is pumped through a column of nitrifying bacteria, and then flows through a series of ponds and plant beds to purify the water.

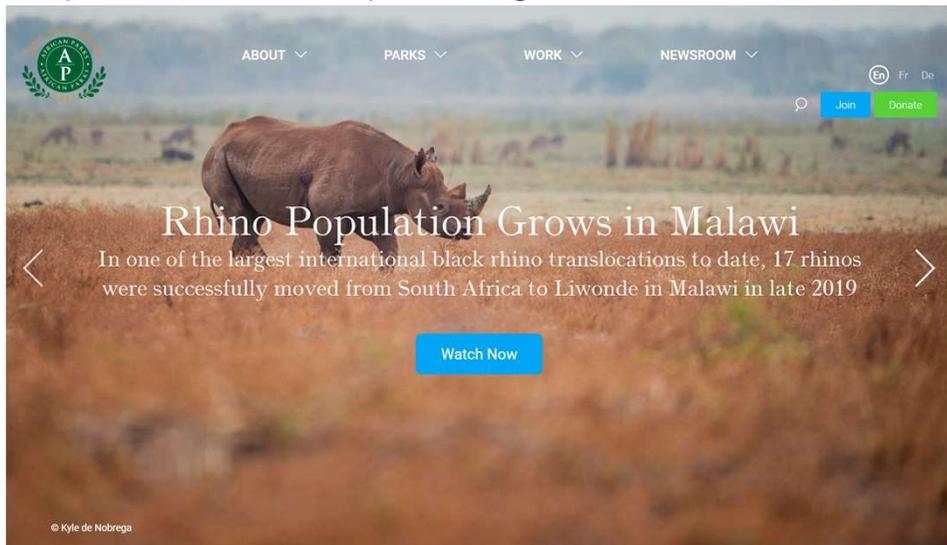

DESIGNATED CHARITY: AFRICAN PARKS

When ordering your solar cells you may elect to donate any % of your ongoing rental income to African Parks who is the nominated charity for this project.

African Parks is a non-profit conservation organisation that takes on the complete responsibility for the rehabilitation and long-term management of national parks in partnership with governments and local communities. We currently manage 19 national parks and protected areas in 11 countries covering over 14.2 million hectares in: Angola, Benin, Central African Republic, Chad, the Democratic Republic of Congo, Malawi, Mozambique, the Republic of Congo, Rwanda, Zambia and Zimbabwe.

DID
YOU
KNOW

The sun produces enough energy in
one second to power the
United States for
9 million years.

SINOGY WILL INSTALL AND MAINTAIN THE SYSTEM

SINOGY IN AFRICA

Sinogy is based in Shandong Province, China. Their manufacturing plants boasts a state of the art facility spreading over 68000sqm. The plant manufactures all their solar products. The team at Sinogy are progressive thinkers, and are constantly busy with research and development. The teams at the Solar energy and LED division have joined forces in engineering the best products for various sectors of the market.

The years of experience, expertise and research and development has culminated in the company producing a complete solution in the LED lighting and solar energy space. They have developed sustainable relationships through the years throughout the world through our innovative products and services.

THE SUN EXCHANGE

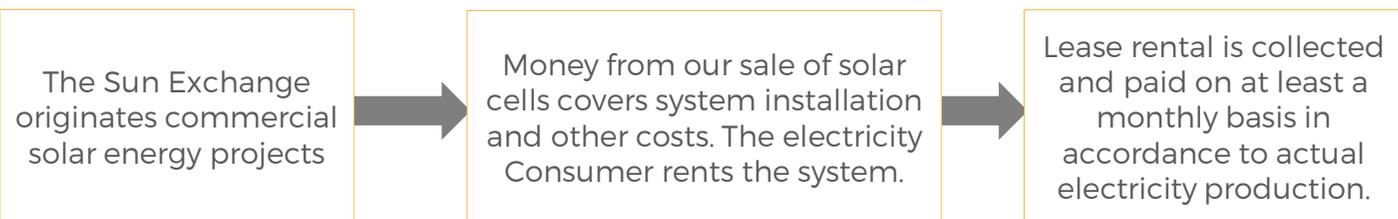

Owner (Lessor) clients value our variety of globally distributed solar energy **projects** to obtain an ethical clean energy rental stream.

Commercial and enterprise (Lessee) clients value the access to solar energy that reduces their operating expenses, stabilises their power supply, **lowers their carbon emissions** and promotes stakeholder engagement in their community

The Sun Exchange is an online marketplace where anyone can buy solar cells and lease them in technically and economically validated commercial solar projects

www.thesunexchange.com

PROVIDING SUPERIOR SERVICE VIA TECHNOLOGY

BLOCKCHAIN SMART CONTRACTS

The Sun Exchange is promoting the representation of solar cells onto commercial contracts in computer code on the blockchain. Shared by a decentralized network of computers, these contracts are transparent, permanent and resistant to “hacking”. Smart contracts automatically execute objectively. For example, smart contracts could automatically debit the Lessee’s account and transfer funds to lessors for each 1 kWh generated at a system without human intervention. This would reduce operational risks and errors over long-term solar projects.

Distributed ledgers

Financial and operational data recorded on a public blockchain would be secure, stable, transparent, and tamper-proof. The Sun Exchange wants to ensure our account holders avoid the type of personal identify theft and data falsification we frequently see in the financial world today

Smart-metering

IoT data-loggers embedded in each solar plant measure electrical output and could govern the distribution of funds as each unit of electricity is generated. As a result,

lessors could receive rental payments that follow the timing of electricity production, rather the timing of corporate events or the calendar. Real-time rental distribution increases trust and confidence levels for our solar cell lessors. It can create a sense of interactivity between you and your solar cells, which could be on the other side of the world. If the electricity Consumer cannot make his payments, the system could be automatically disconnected until payments resume.

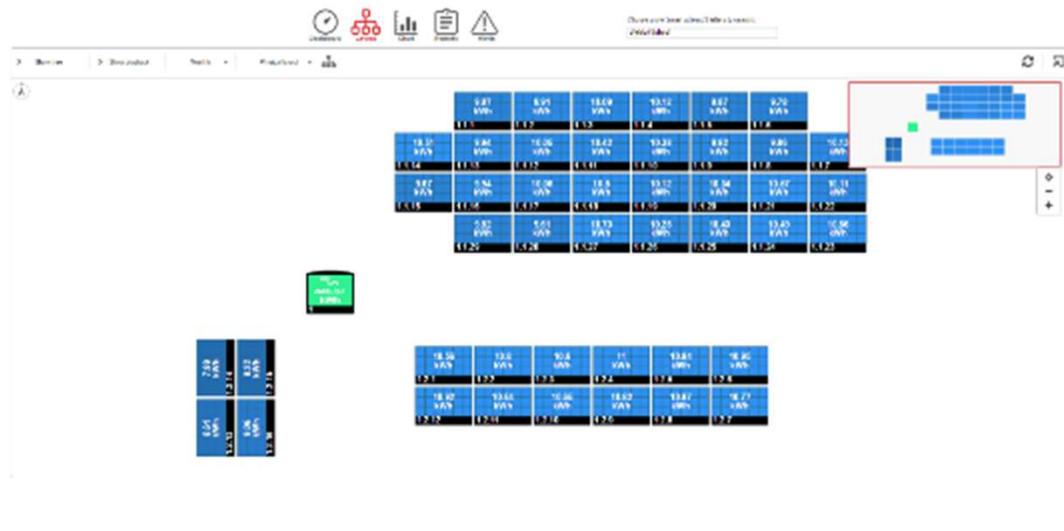

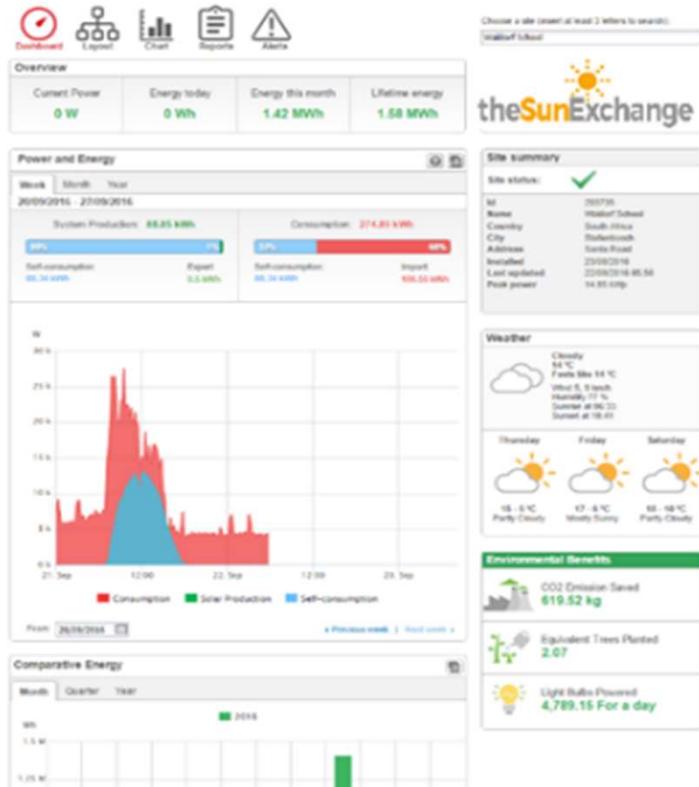

Digital currency fund transfers

Digital currency has removed the friction and costs normally associated with international remittance. The efficiencies of bitcoin allow us to make micro-payments in near-real time at low cost. This means that as long as the sun is shining, you can see your money working.

Transferring local (fiat) currency between countries is often expensive and time consuming. We accept bitcoin so that you can purchase solar project assets wherever you are in the world quickly, easily, and transparently.

PROVIDING SUPERIOR SERVICE VIA TECHNOLOGY

You needn't wait for quarterly reports or press releases to know how your solar cells are performing. The Sun Exchange gives you access to real-time performance data and track rental income generation.

DOING GOOD IS GOOD BUSINESS

OUR VISION

A world powered by clean energy and financed by decentralized capital.

OUR MISSION

To connect the world to the sun.

SAFETY FIRST | We arrange independent financial and engineering checks. We look at counterparties' safety track records. In future we aim to have contracts and data stored on a tamper-proof, globally distributed block-chain

SKIN IN THE GAME | We are involved. We own the balance of system (mounting structure, cabling and inverter equipment) and directly lease the system to the energy Consumer

RESPONSIBILITY | We support the global effort to prevent money laundering and the financing of socially unacceptable activities, and verify the identifies of our customers.

WHAT WE DO

Originate new solar project opportunities
Assess project viability with thorough industry standard due diligence processes.
Vet engineering (EPC) providers
Engage local operation and maintenance providers
Monitor Lessee account pre-payments
Structure the lease and other contracts
Arrange for equipment insurance coverage
Provide and lease Balance of System equipment
Design, plan, execute online crowd sales
Establish accounts to segregate funds

Arrange foreign currency / digital currency transactions
Monitor adherence to compliance regulations
Arrange international payments and money transfers
Outsource identity, KYC, AML checks
Collect, disclose project operational and financial data
Monitor equipment performance using solar smart meters
Arrange distribution of lease rentals
Maintain project books and records

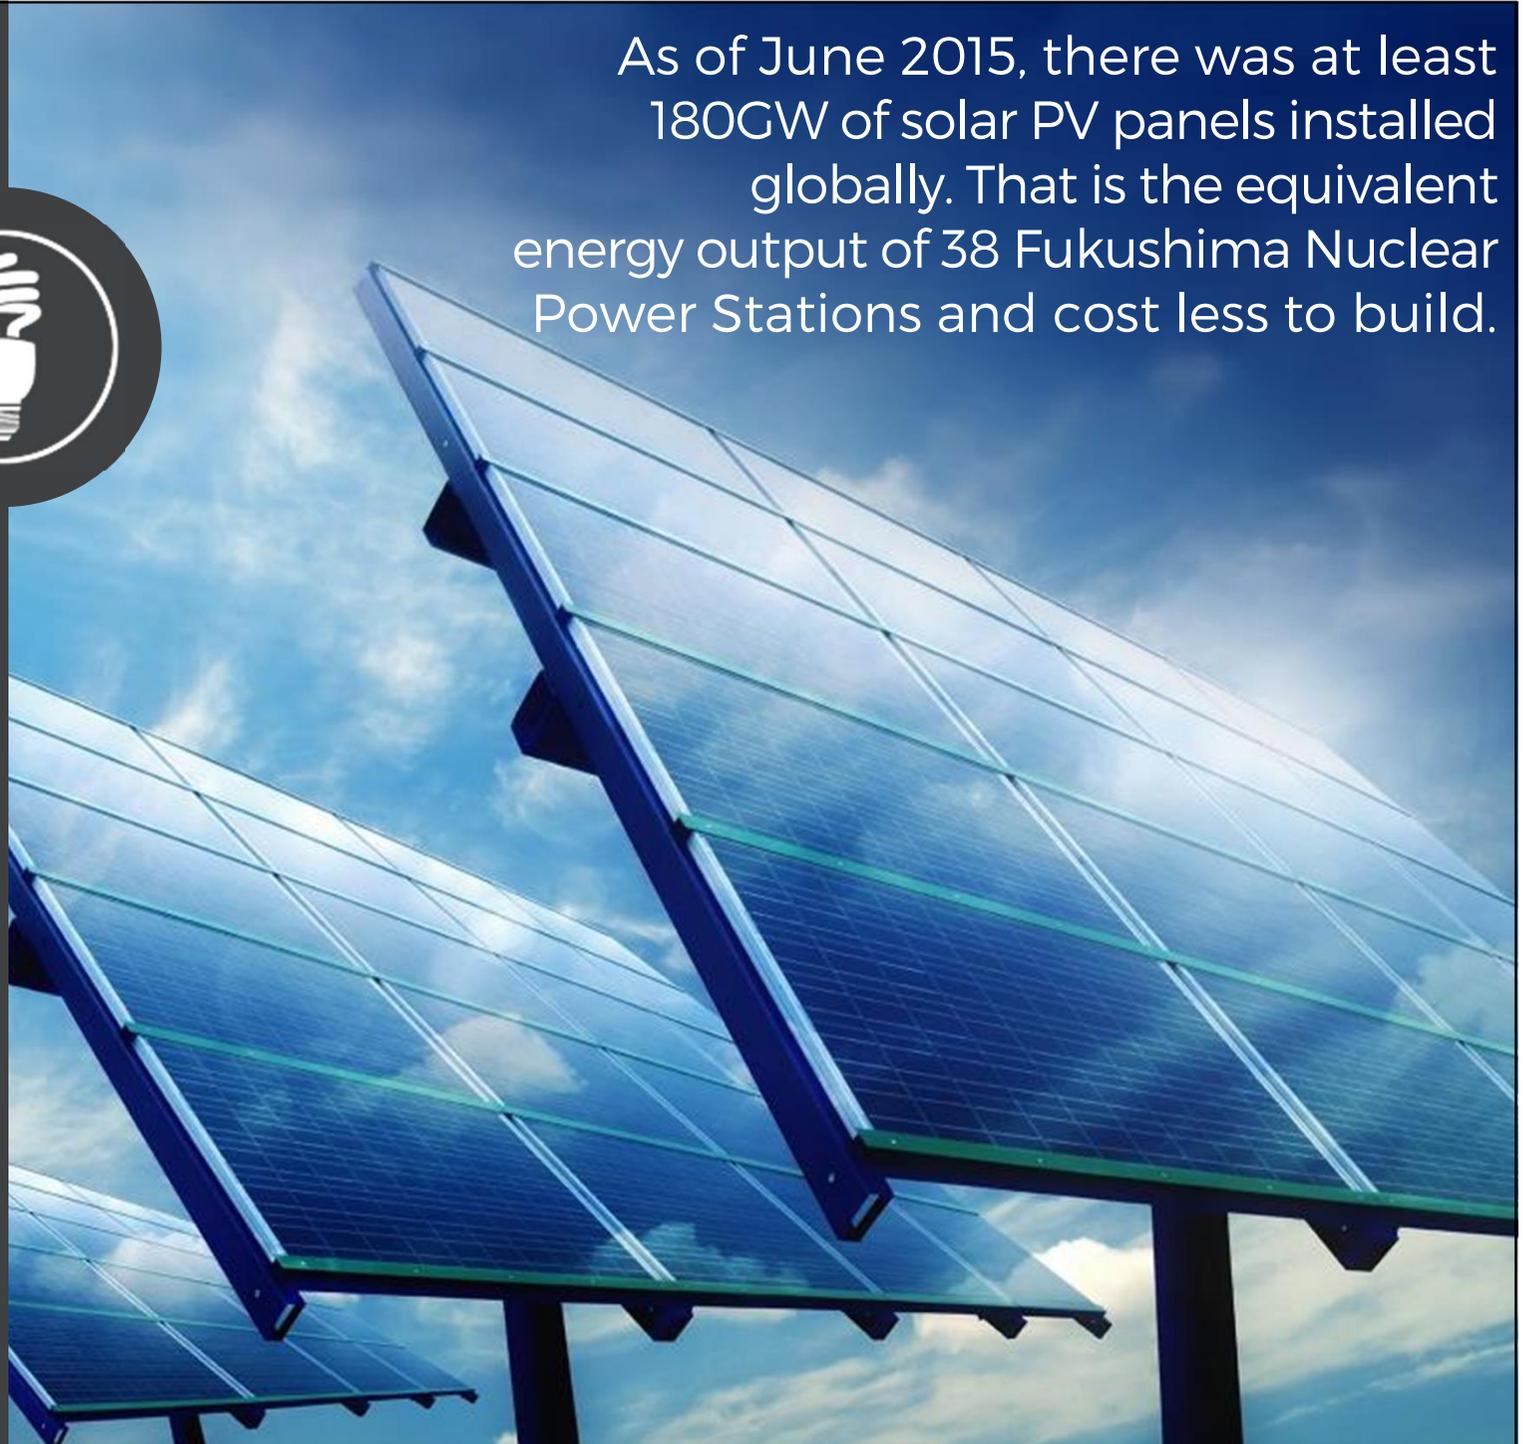

HOW WE MAKE MONEY

- Dealer mark-up on project value
- Servicing fees from rental payments.
- Ownership of plant balance equipment, operational and financial data, renewable energy credits

DID
YOU
KNOW

As of June 2015, there was at least 180GW of solar PV panels installed globally. That is the equivalent energy output of 38 Fukushima Nuclear Power Stations and cost less to build.

ABOUT SOLAR PV

Various technologies are used in the manufacture of solar PV panels – however, they all operate to convert sunlight directly into electricity (rather than using the heat from the sun to generate electricity as with Solar CSP).

The amount of electricity that can be generated in a year at any given site will depend on a number of factors, including among others:

- The annual amount of solar irradiation the site receives.
- This will depend on where in the location of the site, and the amount of cloud cover and/or pollution it experiences during daylight hours at different times of the year.
- The orientation and tilt of the rooftop and solar panels – in the Southern Hemisphere, north-facing rooftops receive more direct sunlight. When installed on a flat roof, the solar panels are mounted on a rack so they can be positioned and angled to most effectively capture the available sunlight (pictured below).

ABOUT SOLAR PV

- The energy conversion efficiency from sunlight into direct current electricity of the solar panels used, taking account of the fact that the solar panels can be expected to be very slightly less effective as time goes by – the manufacturers’ warranties for the panels in our system (which will be made by Suntech or equivalent product of equal or better type and quality) all estimate performance to be at least 80% after 25 years.
- The energy conversion efficiency from direct current electricity into alternating current electricity of the inverters used.
- To estimate the amount of electricity generated we used Helioscope for simulating

photo-voltaic system performance. We import the irradiation data through an imported GIS database and adjust the installation parameters such as inclination, orientation and equipment configuration to match each PV system. The software performs complete calculations and produces an estimate of the “yield” which can be expected from that system. The yield is number of kWh per kWp that can be expected over a year taking into account the variables outlined above. We compare these figures with those from the EPC partner to ensure the system yield forecast is accurate.

ABOUT THE SOLAR PV PLANT

EQUIPMENT

Solar PV System	kWp DC Roof Mount PV System
Battery Type	Lithium Iron Phosphate
Energy Storage	11.52 kWh x 90 units
DoD	90%
Solar Panel Type	Crystalline Silicon
Manufacturer	Canadian Solar
Standard Compliance	IEC-62103 (EN50178), IEC-62109, AS3100
Installation Standard	To meet NRS097 and SANS10142 codes.
Mounting system	Fixed mounting.
Azimuth/inclinations	Various
Inverter Euro eff.	97.5%
DC/AC losses	5.5% / 1.5%
Availability	99.0%

SOLAR YIELD

Est. Annual Generation	1,174MWh
Probability Factor	50%
Yl. USD/Cell/Year	0.971

Principal system components

- Photovoltaic modules
- Mounting system/rack for the PV modules
- Inverter/s and transformer (where required)
- Switch gear and cabling at site
- Battery modules
- Battery inverters
- Energy Management and Fire Extinguishing System

Smart Meter Monitoring

The solar plant is kept under surveillance over the internet. The system data is viewable through a portal and can be viewed online by all owners.

SITE

Site Name	1 Cascade Road, Marondera, Zimbabwe
Elevation a.s.l.	1,600m
System usage	100%

SYSTEM LEASE RENTAL ADJUSTMENTS

The base price for system usage will be charged per cell. Adjustments to the base price for Lessee's payments shall be made on the basis of the following table. The base unit price, as adjusted, will be multiplied by the Asset Output to determine the payments due from Lessee to the Lessor.

Initial per cell charge	Adjustment Basis	Adjustment Frequency	Adjustment Base Month
USD 0.081 per month	CPI + 1%	Annual	To coincide with annual anniversary of the COD.

ENVIRONMENTAL IMPACT

Each solar cell you own and lease to Nhimbe Fresh is expected to offset 135 kg of electricity over the 20 year lifespan of the project. This energy output is equivalent to:

~2 Seedlings grown for 10 years

~5 light Lamps switched to LED

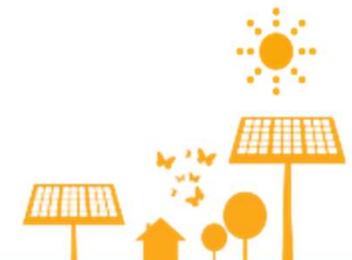

~500 km driven by an average passenger vehicle

Good for your pocket and the planet

In South Africa each kWh of electricity embodies 2.16 lbs (about 0.98 kg) of CO₂, almost double that of the USA and Western Europe. Each solar cell in this project will off-set 4 times the green house gas emissions than it would installed in many places in Europe,

*Sources: US Environmental Protection Agency, <https://www.epa.gov/energy/greenhouse-gas-equivalencies-calculator>
Department of Energy's Energy Information Administration*

BONUS INCOME STREAM - SOLAR COIN

Solar Coins are like 'air-miles' for people that own solar panels. In addition to earning BTC or ZAR rental income from solar cells you buy through The Sun Exchange, you will also receive Solar Coin tokens. You will receive one Solar Coin for each MWh generated by your solar cells.

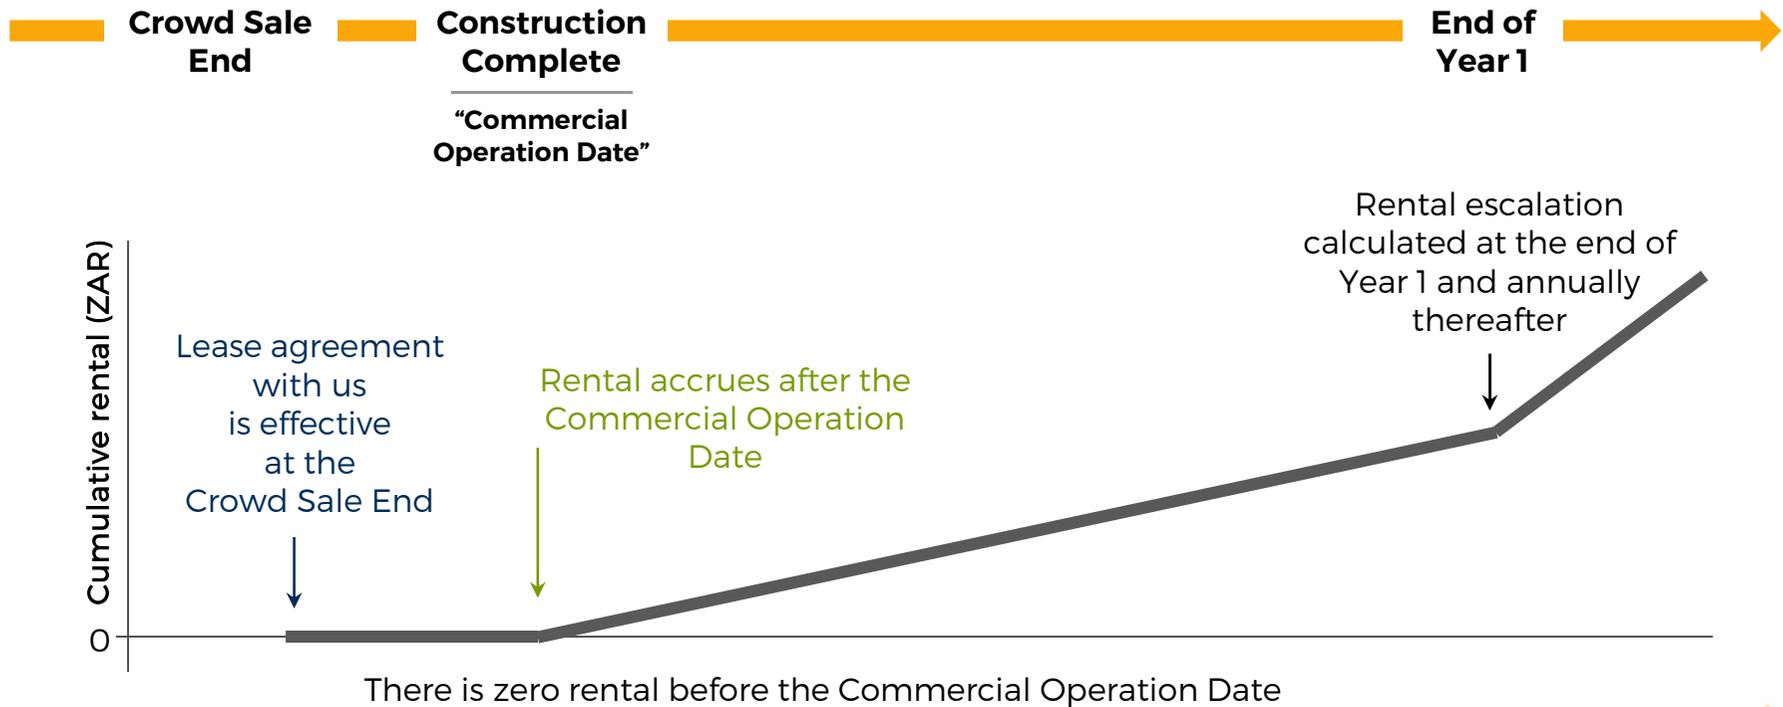

Solar Coins are a valuable digital currency. You can sell them, trade them or you can even spend them on more solar cells through The Sun Exchange! The value of Solar Coins is variable. At time of writing each Solar Coin is worth approximately USD \$0.02. You can check the value of Solar Coin (SLR) [here](#).

LEASE AGREEMENT: INITIAL PHASE

RENTAL STARTS WHEN THE SYSTEM IS CONSTRUCTED

Construction period estimate

<u>Planning & Final Design</u>	<u>Construction</u>	<u>Total</u>
4 - 6 weeks	8-12 weeks	12 - 18 weeks

TAXATION

YOU MAY BE ELIGIBLE FOR TAX BENEFITS

Over 60 countries have implemented policies to promote solar power generation. The type of subsidy varies considerably, and may include

- tax credits
- accelerated depreciation
- direct payments / grants
- tax holidays
- educational benefits

Furthermore, if you elect to lease your solar cells under our operating lease agreement, you may be able to deduct depreciation expenses.

In this product information document, we cannot summarize the many national and state tax policies and incentives that exist for clean energy equipment ownership and use. However, as a start, you may find a variety of useful guides available freely available on the Internet

We encourage our customers to consult a tax specialist to learn about potential tax benefits of owning and leasing solar cells.

COLLECTIONS

The Sun Exchange will set up the system through which lease rental is globally distributed to the solar cell lessors

As part of its responsibilities under the Owner Lease and the Terms of Service, The Sun Exchange will:

- Calculate and collect rental due from Nhimbe Fresh. for use of the solar system
- Maintain a register of current solar cell Owners and Solar Cell Lessors
- Calculate and pay fees, expenses, insurance premiums, and scheduled deposits to reserves
- Pay to you the lease rental for our use of the solar cells, to the extent there are sufficient funds from the rental under the lease to Nhimbe Fresh and subject to a monthly maximum amount
- Arrange foreign currency transactions for international customers as requested
- Notify you if a Force Majeure or other event occurs that delays collection or payment
- Provide other notices relating to Nhimbe Fresh and other transaction parties, as necessary

The Terms of Service for all our Website Users is posted on www.thesunexchange.com;

Copies of the Owner Lease and all relevant documents will be made available to account holders considering purchase and lease of solar cells. Upon placing an order to purchase solar cells on our website and also opting to lease one or more solar cells if purchased, you indicate your agreement with all of the terms and conditions of these agreements, and will be deemed a signatory to those agreements when they become effective

The Sun Exchange aims to empower our solar cell Owners by maintaining high standards of transparency and timely access to information

The Sun Exchange undertakes to make frequently available, online or via email:

- Nhimbe Fresh lease rental historical payment data
- Historical and/or real-time plant operation data
- Maintenance and repairs required and completed
- Current balances in Nhimbe Fresh's system lease rental account
- Copies of all contracts and other documents relevant to ownership and leasing solar cells
- Material information relating to service providers (EPC, O&M, Luno, and others)
- Adjustments and escalations of lease rental rates, and system expenses
- Insurance premiums, claims and payments. Changes in insurance providers and terms
- Amendments to accounts and payment methods
- When available, how to access information via the blockchain
- Other information relevant to the solar cells

DID
YOU
KNOW

The largest solar power plant in the world is the Long Longyangxia Dam Solar Park in China which has an output of 850 MWp and covers 23 km².

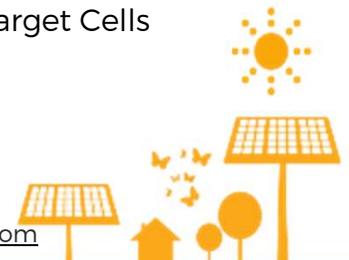

SOLAR CELLS SUMMARY TERMS

Product offered:	Solar cells. Each solar cell is one crystalline silicon cell, with unique identifier, with the technical specifications described in this product information document
Unit Price:	ZAR 113 per solar cell
Payment Currencies:	South Africa Rand (ZAR) and Bitcoin (BTC)
Sale Period:	Beginning upon the announcement and ending when total purchases reach the Target Cells Amount, or after 60 days, which ever is sooner
Sale Period Extension:	The Sun Exchange reserves the right to extend the sale period up to an additional 60 days
Pro-User Bonus:	Payable to The Sun Exchange (SunEx) supporters that backed our Indiegogo Campaign. Bonus payments and others <u>available</u>
Payment Accounts:	ZAR trust account, and digital wallet at Luno, as indicated on <u>www.thesunexchange.com</u>
Total Cells Available:	181.440 solar cells. If fewer are sold, SunEx will cancel the sale, and return money in the payment currencies. SunEx may reduce the Target Cells Amount at its discretion

Please refer to the Glossary and Terms of Service for definitions. Contact SUNEX with questions at enquiries@thesunexchange.com

SOLAR CELLS SUMMARY TERMS

Bitcoin Payment

Account holders purchasing in Bitcoin outside South Africa will secure the number of cells afforded by the value of BTC at the time the sale ends. Any BTC excess payments will be returned to the account holder in full in ZAR equivalent.

Allocation Method:

First come first served, with consideration for the number of cells to be deployed into the system, as monitored by Sun Exchange

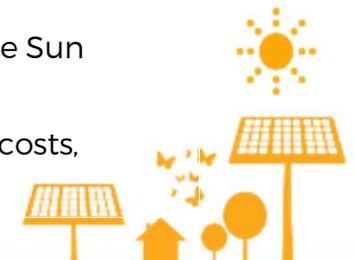

Purchase Method:

Users that have successfully completed the sign-up process for a Sun Exchange account on www.thesunexchange.com may review solar cell purchase and lease terms and at the time of ordering cells may choose either to take physical possession of solar cells or lease cells within the solar system.

The Sun Exchange Remuneration:

1. Dealer Markup, which is 30% of the system cost including installation
2. Service Fee, which is 20% of the gross rental revenue which covers insurance costs, operations and maintenance and contributions to a maintenance reserve fund.
3. Grant of certain related balance of system equipment to The Sun Exchange (Pty) Ltd.

(note: all forecast IRR figures are net of Dealer Markup, service costs, insurance and maintenance)

OWNER LEASE SUMMARY TERMS

Option To Lease:	SunEx account holders that purchase solar cells via this sale have the opportunity to opt out of the lease their cells to a Special Purpose Corp (the "SPC") established by SunEx. The SPC will otherwise deploy those purchased cells together with other solar equipment into the system described in this product information document. The operating lease terms can be found in the Owner Lease.
Lessors:	Solar Cell Owners who elect to enter the Solar Cells Owner Lease Agreement (Owner Lease)
Lessee:	A Special Purpose Corp (SPC) established by SunEx
Authority To Sub-Lease	SPC will lease the entire solar system to Nhimbe Fresh, including the solar cells, under the terms of a SunEx Lease
Lease Rental Commencement Date:	The Commercial Operation Date (COD). Your money may not accrue lease rental prior to this date, including during the sale period, other than deemed early energy payments.
Events of Default:	Failure to pay amounts payable within 30 days, breach of other terms of the Lease and other agreements not remedied within 30 days, insolvency or analogous event, cessation of business, etc
Lease Rental Accounts:	Accounts for escrow of lease rental paid by the SPC
Lease End Date:	The 20th anniversary of the COD

Please see SunEx's Terms of Service, Solar Cell Owners Lease Agreement, and Glossary for more information. Contact SunEx with questions at enquiries@thesunexchange.com

OWNER LEASE SUMMARY TERMS

EPC	Sinogy will provide engineering, procurement and construction services to SPC for the system
O&M	Sinogy will provide system operations and maintenance services to SPC
The Sun Exchange Lease-Related Fees:	Servicing fees, paid monthly, equal to 20% of the rental collected from the Nhimbe Fresh. under the Owners Lease
SunEx Rental:	In the Owner Lease, for each calculation period, SPC will pay SunEx Rental in ZAR calculated as the Available Balance minus the Project Expenses due. The Available Balance is the Base Rental amount (based on the EEP and subject to a maximum amount per period, as stated in the Owner Lease) or the balance in Nhimbe Fresh's rental account, whichever is smaller. Lessors without ZAR accounts will receive amounts converted and paid in BTC
Rental Payment Frequency:	SunEx Rental is due at least monthly, but may be paid more frequently at SPC's option
Output:	Electricity (DC) generated by the rooftop PV generation plant (the Project) measured in kWh. Live energy data will be made viewable on a data monitoring portal provided by Sun Exchange.

Please see SunEx's Terms of Service, Solar Cell Owners Lease Agreement, and Glossary for more information. Contact SunEx with questions at enquiries@thesunexchange.com

OWNER LEASE SUMMARY TERMS

EEP Adjustment Basis:

Rental will escalate annually at CPI + 1% per year on the anniversary of COD.

Commercial Operation Date (COD):

The date on which the EPC partner signs the electrical completion certificate (CoC) confirming the system has been installed and is operational

The Contracts:

Each solar cell deployed in the system will be subject to the terms of the Owner Lease and SunEx's Terms of Service, which may be amended from time to time. By making a order to purchase through SunEx's website and electing to deploy cells into the system at that time, each account holder signifies his agreement with those terms, and will be deemed a signatory to the Owner Lease at the end of the sale period as determined by The Sun Exchange in its sole and absolute discretion

Please see SunEx's Terms of Service, Solar Cell Owners Lease Agreement, and Glossary for more information. Contact SunEx with questions at hello@thesunexchange.com

GLOSSARY

There are many words and acronyms in the world of solar energy and money that are daunting and sometimes even down right bizarre. We don't want these words to scare you away. More often than not, the concepts behind these words are actually quite simple!

We want to help you learn to 'speak solar' so we have put together this glossary of terms for you so you can fully understand the opportunities we are hosting, even if you have never invested in anything before. If you are still confused, drop us an email or contact an Independent Financial Advisor.

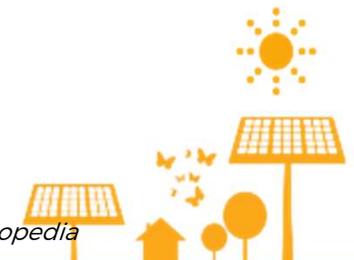

☪ **Solar cells:** A solar cell is physical product. Purchased through The Sun Exchange, you are provided with legal contracts relating to the cells, which make possible its lease. Solar cell ownership enables The Sun Exchange to arrange for the lease of electricity generation

equipment to the Consumer, and can generate lease rentals that directly depend on the timing and amount of energy generation, among other things

- ☪ **Unit Price:** The cost of one solar cell, which is stated on page 2 of this document.
- ☪ **Project Lease Agreement:** An agreement between the SPC and Nhimbe Fresh establishing the duration, pricing, and other terms of lease of the Solar cells and Solar Equipment.
- ☪ **Solar cell Owners Lease Agreement:** An agreement between the special purpose corporation (SPC) and Owners establishing the lease of the solar cells to SPC

☪ **SolarCoin:** SolarCoin is the world's largest community solar electricity reward program. 1 SolarCoin represents 1 MWh of solar electricity generation. As a verified a solar cell owner you may be entitled to SolarCoins for free. SolarCoins are managed by the SolarCoin Foundation. Sunex is not affiliated with and does not guarantee any obligations of the SolarCoin Foundation."

GLOSSARY

- ☉ **Solar cells Lease Rental:** The amount paid to each lessor by the SPC. Lease Rental will effectively be paid to you in return for allowing usage of the solar cells. The Lease Rental is calculated as lease rate per cell x number of cells, less expenses, taxes, fees, and deposits to reserves
- ☉ **Sale period:** The **window of time** where you can place an order for solar cells. The sale is open for up to 60 days and at our discretion an additional 60 days. Purchases are arranged on a “first come, first served” basis.
- ☉ **Equivalent Energy Price:** The price at which Nhimbe Fresh must lease your cells. The price in the initial year is stated on page 2 of this document; thereafter the price is adjusted annually.
- ☉ **Solar Energy Consumption:** The amount of kilowatts (kWh) used Nhimbe Fresh from the solar system during a given period
- ☉ **Kilowatt hour (kWh):** A kilowatt hour, kWh, is a unit of electricity – a kilowatt hour is equivalent to one kilowatt (1 kW) of electrical power for one hour (1 h) of time. A megawatt hour, MWh, is one thousand kilowatt hours.
- ☉ **Kilowatt peak (kWp):** Kilowatt or kilowatts peak are used in the solar photovoltaic industry to measure the maximum potential output, the peak output, of a photovoltaic module. By setting certain standard conditions, the industry can compare the potential output of one module with another.
- ☉ **Pro-User Bonus:** Bonuses being paid by The Sun Exchange to all account holders in this offer that contributed to our Indiegogo campaign in recognition that their backing helped kick start the business. If you wish to access Pro-User status and unlock other perks, you can still do so through pledging here: [https://www.indiegogo.com/projects/the-sun-exchange-a-solar-powered-financial-system/x/10598990#/#/](https://www.indiegogo.com/projects/the-sun-exchange-a-solar-powered-financial-system/x/10598990#/)

GLOSSARY

- ☉ **Sale End:** Once valid orders sufficient to purchase the total available solar cells have been received, we estimate that within 20 days all of the conditions precedent will be satisfied and we will be ready to sign all the documents, and the system construction can officially begin.
- ☉ **Sunex Tokens:** Sun Exchange's rewards tokens 'SUNEX' are issued for purchases. Consult the SUNEX Whitepaper for a detailed breakdown on how these are earned and the benefits of doing so.
- ☉ **Target Cell Number:** The total number of solar cells sold such that we can pay for the engineering, procurement, and construction of the solar energy system at Nhimbe Fresh and to pay various other fees and expenses associated with the project.
- ☉ **Internal Rate of Return:** The IRR. The discount rate at which the present value of all future cash flow is equal to the amount of capital utilised.
- ☉ **USD:** United States Dollars
- ☉ **BTC:** Bitcoin
- ☉ **PV:** Photovoltaic. The photovoltaic effect is the creation of voltage or electric current in a material upon exposure to sunlight. Sunlight is absorbed, causing excitation of an electron or other charge carrier to a higher-energy state. This creates an electric potential (or voltage) is produced by the separation of charges.
- ☉ **Balance equipment:** All of the equipment in the solar system excluding the solar modules.
- ☉ **ZAR:** South Africa Rand currency
- ☉ **Lessee:** A participant of a leasing contract, having the right of use of property from its real owner.
- ☉ **Special Purpose Corp (SPC):** A corporation established by SunEx for the specific and sole purpose of leasing solar PV equipment for this project. The SPC keeps the solar assets and cash flows of the project separate. The SPC charter has certain terms which protect it from bankruptcy.

Sources: Wikipedia, Investopedia

GLOSSARY

- ☉ **Lessor:** A participant of a leasing contract, who takes possession of the property and provides it as a leasing subject to the lessee for temporary use
- ☉ **Consumer Price Index:** A consumer price index (CPI) measures changes in the price level of a market basket of consumer goods and services purchased by households. The United States CPI will be obtained here: www.bls.gov/cpi/tables/home.htm
- ☉ **EPC:** Engineering, procurement and construction company. Designs, purchases, and installs the equipment creating the plant
- ☉ **O&M:** The company charged with administration, conduct of

operations, equipment status control, and preventive and corrective maintenance of the plant. Controls the performance of maintenance in an efficient and safe manner such that economical, safe, and reliable plant operation is optimized

- ☉ **Delinquency:** Commonly refers to a situation where a Lessee is late or overdue on a payment. In the case of The Sun Exchange, failure to pay on the scheduled date, and post due for up to 30 days
- ☉ **Default:** Default can occur when Nhimbe Fresh fails to pay Lease Rental for more than 60 days. Default may also occur if Nhimbe Fresh is insolvent, is petitioned to bankruptcy, or applies for bankruptcy. Other events of

default are listed in the Project Lease Agreement. If an event of Default occurs, unpaid amounts become immediately due. Failure to pay could result in loss of principal and future Lease Rental

- ☉ **Inverter:** A power inverter, or inverter, is an electronic device or circuitry that changes direct current (DC) to alternating current (AC).
- ☉ **Market Place:** A service provided by The Sun Exchange on its website to allow potential buyers and sellers of solar cells to find each other.

Leonardo Da Vinci designed a solar energy system in the 16th century in the form of a concentrated sunlight beam weapon

DID
YOU
KNOW

RISK FACTORS

We cannot set out all the risks that may be involved by purchasing and leasing solar cells. You should consider whether making this purchase is suitable for you in the light of your own personal circumstances and take advice as necessary. The following are some of the risks that may be involved

THINGS YOU NEED TO KNOW ABOUT PURCHASING SOLAR CELLS

Solar cell leases are long-term commitments and you should consider what is the right amount to spend given your own circumstances.

Where we have made estimates or projections of anticipated rentals, costs, or inflation these are based on our current beliefs and assumptions at the date of publication – we won't necessarily update them. These statements may involve known or unknown risks, uncertainties and other important factors which could cause actual results, performance or achievements to differ from those we expect. In particular, while we believe that any predictions or forecasts we give are reasonable and based on reasonable assumptions supported by

objective data, they may be affected by risks and other factors not set out in this document and therefore are not reliable indicators of future performance.

The solar cell Owners Lease Agreement & Terms of Service in place between you, The Sun Exchange and the SPC are legally binding, however there is no guarantee that you will receive the whole or any part of the expected Lease Rental, or the return of your initial purchase money. In such an instance lost rentals may be sought through legal arbitration.

RISK FACTORS

Nhimbe Fresh insolvency or restructuring risk

Nhimbe Fresh together with any supplier, partner or contractor on the system can be the subject of insolvency or restructuring procedures which may affect whether they can perform their obligations. This may also mean that, in relation to suppliers or contractors, it may not be possible to secure the same level of service at the same price resulting in greater costs.

Force majeure

There is always the possibility that an event could occur that is completely out of our control and completely unexpected. This includes events such as natural disasters or acts of terrorism.

General contractual risks

We are reliant for some services on third party providers. Whilst we are thorough in checking who we work with and in ensuring proper contractual arrangements are in place, we cannot guarantee that those providers will perform their contractual obligations adequately. Pursuing providers for breach of contract can result in delays and legal expenses. Any supplier or partner can undergo insolvency or restructuring procedures which may affect whether or not they can perform their obligations.

Withholding taxes

Any withholding taxes assessed payments will be deducted prior to payment to solar cell purchasers and lessors. Nhimbe Fresh and The Sun Exchange will not increase amounts paid in order to compensate Lessors.

RISK FACTORS

Government Policy

The Zimbabwe Government has issued an ambitious renewable energy policy with a goal of adding 1GW of renewable energy onto their grid. Sun Exchange has received written support from the Zimbabwe energy authority for this project. There may be changes in laws, regulation or government policy which might impact how you can purchase and lease solar cells. These may include, for example:

- Changes to tax law which might affect us or make it less advantageous for you to own solar cells.
- Regulatory issues which might entail expenditure, costs or operational restrictions which we have not foreseen.
- Changes to the basis on which the CPI is calculated.
- General economic circumstances which may

lead to increases in costs or unforeseen expenditure.

Currency Risk

Lease Rental payments for energy generated will be denominated in United States Dollars. On a monthly basis these payments will be converted to ZAR or BTC into your Sun Exchange wallet. Rental balances will need to be received in BTC for the purpose of transferring your balances to lessors located outside of South Africa or those without a ZAR bank account. All lessors not using USD as the base currency will be exposed to the currency volatility risk. The timing of our currency conversions we will make at our sole and absolute discretion.

RISK FACTORS

Insurance Risk

We, or a contractor, may, where economically practicable and available, endeavor to mitigate some of the project risks by procuring relevant insurance cover. However, such cover may not always be available or economically justifiable, or the policy provisions and exclusions may render a particular claim outside the scope of the insurance cover. There will also remain the risk that an insurer defaults on a legitimate claim.

discovery proceedings or to appeal an adverse decision.

Arbitration

SunEx and the SPC may require that any claims against it be resolved through binding arbitration rather than in the courts. The arbitration process may be less favorable to lessors than court proceedings and may limit your right to engage in

RISK FACTORS

Operational Issues

Pre and post-operational issues relating to the quality of installations could result in the loss of solar yield and therefore rental amounts. The design agreement with the EPC provides for an audit upon completion. In the event that there are any installation or operational issues with the PV systems, the installer will pursue the relevant party on the SPC's behalf, if relevant. If there is an issue with any of the equipment, the installer will ensure the relevant manufacturer is pursued under the terms of the warranties if it makes commercial sense to do so. Although they may use equipment made by different manufacturers, it will be of similar type and quality.

The terms of the lease contain key rights including access rights, maintenance obligations and our rights to revenue and the ability to remove the system equipment upon lease termination.

Adverse Economic Conditions

Adverse economic conditions beyond our control may affect Nhimbe Fresh's ability to pay project lease rental. Factors such as declining revenues or increased operating expenses, ability of Nhimbe Fresh to collect on accounts receivable or other amounts owed, lawsuits brought or legal judgments against the Nhimbe Fresh changes in commercial lending terms including the calling of letters of credit or other debt obligations, unexpected changes in management of Nhimbe Fresh or other impacts on the operations and finances of Nhimbe Fresh that result in a shortage of cash available to satisfy its obligations under the lease with the SPC, which will impact the amount of lease rental to pay solar cells lessors.

RISK FACTORS

Service Disruption

If a catastrophic event resulted in a platform outage and physical data loss, The Sun Exchange's ability to perform its servicing obligations would be materially and adversely affected. The satisfactory performance, reliability, and availability of The Sun Exchange's ("SunEx") technology and its underlying hosting services infrastructure are critical to our operations, level of customer service, reputation and ability to attract new users and retain existing users. SunEx's hosting services infrastructure is provided by a third party hosting provider (the "Hosting Provider"). Any interruptions or delays in SunEx's service, whether as a result of an error by the Hosting Provider or other third-party error, SunEx's own error, natural disasters or security breaches, whether accidental or willful, could harm our ability to service the solar cell Owners or maintain accurate accounts, and could harm

SunEx's relationships with its clients and its reputation. SunEx's disaster recovery plan has not been tested under actual disaster conditions, and it may not have sufficient capacity to recover all data and services in the event of an outage at a facility operated by the hosting provider. These factors could prevent us from processing or posting payments to solar cell Owners, damage SunEx's brand and reputation, divert its employees' attention, and cause users to abandon our service platform.

To mitigate the risks of service disruption discussed above, SunEx intends to migrate many of its services to a blockchain ledger and autonomous smart contracts. By decentralizing information storage and functionality, SunEx intends to increase the security and reliability of its services

RISK FACTORS

Loss of Books and Records

Events beyond our control may damage SunEx's ability to maintain adequate records, maintain the online financing platform, or perform our servicing obligations.

If a catastrophic event resulted in a platform outage and physical data loss, our ability to perform our servicing obligations would be materially and adversely affected. Such events could include, but are not limited to, fires, earthquakes, terrorist attacks, natural disasters, computer viruses and telecommunications failures. If SunEx's electronic data storage and back-up storage system are affected by such events, we cannot guarantee that you would be able to recoup all the money spent on your purchase.

To mitigate the risks of service disruption discussed above, SunEx intends to

migrate many of its services to a blockchain ledger and autonomous smart contracts. By decentralizing information storage and functionality, SunEx intends to increase the security and reliability of its services

Limitation on Individual Claims

When you create a SunEx account, you enter into SunEx's standard Terms of Service which sets forth your principal rights and obligations. To protect SunEx from having to respond to multiple claims by lessors in the event of an alleged breach or default, the Terms of Service restrict rights to pursue remedies individually in connection with such breach or default. Except in limited circumstances, such remedies may only be pursued by a representative designated by the holders of a majority-in-interest of a particular SunEx project.

RISK FACTORS

Reliance on product and service providers in the solar industry

Volatility in the business environment for providers of products and services related to solar power could adversely affect the ability of the SPC, Sun Exchange and the OM to service the solar plant.

Our business is dependent on products and services provided by wide array of third party developers, equipment suppliers, installers and service providers. In recent years, the business environment relating to solar power generation has been highly volatile and has been adversely affected by changes in government funding, tax incentives and foreign competition. As a result, many companies doing business in the solar power industry have encountered significant

financial difficulties or been forced to discontinue operations altogether.

In the event such difficulties affect a company that is delivering important products or services to a Project, the completion of the project or its ongoing operations could be jeopardized, which could result in a default in payments to the lessors of the solar cells.

A counterparty providing necessary services may become insolvent. The Sun Exchange and/or the SPC will endeavor to hire a replacement party on substantially similar terms, although there is no assurance this will be possible, and Sun Exchange and the SPC bear no responsibility in this case.

Regulation of the Internet, block-chains, and digital currencies

As global finance develops, governments may adopt new laws to regulate Internet commerce, digital currencies, and block-chain technologies which may negatively affect our ability to service Owners of solar cells.

The cost to comply with such laws or regulations could be significant and would increase our operating expenses, and we may be required to pass along those costs to holders of solar cells in the form of increased fees. Governments may impose taxes on services provided, which would adversely affect the viability of our platform.

Committed Funds

When you commit to purchase a solar cell, you must complete payment prior to Sale End.

Deposits to purchase solar cells are irrevocable and during the period between the time of your purchase and the time when your allocation of solar cells is completed, you will not have access to your funds.

RISK FACTORS

Regulation of SunEx

SunEx believes it conducts its businesses in a manner that does not result in being characterized as an electrical utility subject to regulation in any nation or state.

Furthermore, as an e-commerce platform we believe we are not an investment company, broker-dealer, bank, or other regulated financial institution and we consider solar cells to not be a financial product as are hardware items being leased under a commercial contract.

If, however, in future SunEx is deemed to be conducting a business requiring registration or regulation, it may be required to institute burdensome compliance requirements

and its activities may be restricted, which would affect its business to a material degree.

We are not subject to the electrical utility or banking regulations of any state or national regulatory agency.

We are not subject to the periodic examinations to which such electrical utilities, commercial banks, broker-dealers or other such institutions are subject. Consequently, we are not subject to regulatory oversight relating to our capital, asset quality, management or compliance with laws.

RISK FACTORS

No Appointed Agent

Lessors of solar cells will not have an appointed agent to represent and protect their interests under the terms of the Owner Lease, Terms of Service, and other related documents.

Solar cell lessors may assemble to discuss and decide material matters relating to their purchases and the lease contract. At his option, any lessor may appoint a third party agent or trustee.

Installation Delays

For a solar project if this type, the risk of installation delays is very low. We believe we have allowed plenty of time to complete the installation of the PV systems so that it is possible to pay Lease Rental at the end of the third month following the crowd-sale end. In circumstances the lease period will only begin once the solar plant has been commissioned and is fully operational.

RISK FACTORS

In some circumstances, we have the right to donate certain rental income from your solar cells to a charity that you select, instead of paying it to you.

Each nation and jurisdiction has its own laws and regulations governing the offering of financial and other products which provide the purchaser to earn income over time.

In the event we determine that the sale of solar cells and subsequent payment of lease rental to you in excess of your original purchase price would require us to register the sale as a securities offering, or seek an exemption under securities laws or regulations in your jurisdiction, we have the option to not pay you rental income in excess of your original solar cells purchase price, and instead donate only those excess rental amounts to a charity you select.

Feasibility Phase

The completion of the crowd-sale will trigger a detailed structural assessment of the roof on which the solar cells will be mounted. The discovery of any remedial work required may result in either: a project delay whilst this work is completed, or of not feasible, a cancellation of the project and a total refund of solar cell purchases will be made into the solar cell buyers Sun Exchange wallet in ZAR equivalent of the cell purchase price.

Legal Disclaimer

The role of The Sun Exchange ("SunEx") is to provide a platform for selling solar cells which buyers can then lease for use in a project. Neither SunEx nor any of its affiliates is offering or selling any securities, or arranging the offer or sale of any securities. SunEx is not advising you as to the merits of, or making a personal recommendation to you in relation to, purchasing or leasing solar cells. You should consider carefully whether purchasing or leasing solar cells in this Project is suitable for you in the light of your own personal, financial and tax circumstances. You should consider carefully all the information set out in this product information document, including the information set out in 'The Risks'.

The rate of, and value of, the rental payments can go down as well as up. Forecasts, estimates and projections as to lease rental rates and amounts are not a reliable indicator of these matters and may be impacted by various factors – see 'The Risks'.

If you are in any doubt as to any aspect of purchasing or leasing solar cells in the project, including any accounting or tax issues, you should seek independent advice from an authorized person who has experience in advising on such matters. Nothing in this this document should be read or understood to be financial, investment, tax or accounting advice.

Nhimbe Fresh, Sinogy, The Sun Exchange, the SPC, and other parties to the transaction are not subject to electrical utility, securities and banking laws or financial regulatory oversight in South Africa and other countries. Neither this sale of solar cells nor this product information document, the Owner Lease,

Terms of Service, nor any related document will be registered with any government, regulator, central bank, securities exchange, or authority.

There is no guarantee that you can sell your solar cells after purchasing them. Neither Nhimbe Fresh nor The Sun Exchange is obligated to purchase or early redeem your solar cells. The solar cells have not been admitted to listing on any electricity or commodities market or other regulated market and are not expected to be dealt on any exchange or other such market.

Where we have made estimates or projections of anticipated revenues, costs or inflation these are based on our current beliefs and assumptions at the date of issue – we won't necessarily update them. These statements may involve known or unknown risks, uncertainties and other important factors which could cause performance to differ from those we expect. In particular, while we believe that any predictions or forecasts are reasonable and based on reasonable assumptions supported by objective data, they may be affected by risks and other factors not set out in this document and therefore are not reliable indicators.
